## Figuring Yardage for Valance Curtains

## Beginner's Guide to Sewing an Easy Valance Curtain

 WAS Blog 2021 by Mary Beck, BERNINA Educator
## Step 1: Fabric Widths Needed

This step determines the number of widths of fabric (WOF) you will need. I'm showing you MY measurements and then giving you a spot for yours.

| ME |  |
| :--- | :---: |
| Length of rod: | $75^{\prime \prime}$ |
| Multiply by desired amount of <br> fullness: | $\times 2$ |
| My Total: | $=150^{\prime \prime}$ |
| Total side hem depth (2 sides): | $+4^{\prime \prime}$ |
| Total + side hem depth: | $=154^{\prime \prime}$ |
| Divide by my fabric width (WOF): | $44^{\prime \prime}$ |
| Number of fabric widths I <br> needed: | $3.5^{*}$ <br> widths |

| YOU |  |
| :--- | :--- |
| Enter your rod length: | ( |
| Enter and multiply by your <br> desired fullness: | $=$ |
| Your total: | $=$ |
| Total side hem depth (2 sides) | $\div+4^{\prime \prime}$ |
| Your Total + side hem depth: | $=$ |
| Divide by your fabric width <br> (WOF); |  |
| Number of fabric widths you <br> need: |  |

*I rounded up to 4 widths of fabric. There will be seam allowances between the panels and my medium weight fabric will be fine with a little more fullness. There is also the added benefit that whole numbers are a lot easier to work with!

## Step 2: Cut Length

This step determines how long you will be cutting your widths of fabric. (This is from cut side to cut side, NOT selvage to selvage.)

| ME |  |
| :--- | ---: |
| Desired finished length (below the <br> rod): | $18^{\prime \prime}$ |
| Add twice the rod pocket $\left(2 \times 1 \frac{1}{2} "\right):$ | $+3 "$ |
| Add twice the header height $(2 \times 2 ")$ | $+4 "$ |
| Add the total bottom hem depth: | $+4 "$ |
| Add $1 / 2 \prime$ " turn under for rod pocket: | $+1 / 2^{\prime \prime}$ |
| Add $1 / 2$ " ease: | $+1 / 2^{\prime \prime}$ |
| Total Cut Length: | $=30^{\prime \prime}$ |

| YOU |  |
| :--- | ---: |
| Enter your desired length (below <br> the rod: | - |
| Add twice the rod pocket $(2 \mathrm{x}$ <br> your rod pocket"): | + |
| Add twice the header height $(2 \mathrm{x}$ <br> your header height) | + |
| Add the total bottom hem depth | $+4^{\prime \prime}$ |
| Add $1 / 2^{\prime \prime}$ turn under for rod pocket: | $+1 / 2^{\prime \prime}$ |
| Add $1 / 2^{\prime \prime}$ ease: | $+1 / 2^{\prime \prime}$ |
| Total Cut Length: | $=$ |

## Step 3: Yardage

This step will tell you how much fabric you need to buy.

| ME |  | YOU |  |
| :---: | :---: | :---: | :---: |
| Number of fabric widths (Step 1): | 4 | Number of fabric widths you need (Step 1):: |  |
| Multiply by the Cut Length (Step 2): | $\times 30$ " | Multiply by the your Cut Length (Step 2): | x |
| My Total Inches: | =120" | Your Total Inches: | $=$ |
| To determine the yardage needed, divide number of inches needed by 36 (\# inches/yard). $120 \div 36$ | $\begin{array}{r} 3.33 \\ \text { yards } \end{array}$ | To determine the yardage needed, divide number of inches needed by 36 (\# inches/yard). $\qquad$ $\div 36$ |  |

3 1/2 yards of $44^{\prime \prime}$ wide main fabric was needed to make my valance. (I rounded up since I'm happier buying just a little more than just a little less.)

That wasn't so hard, was it?

## LINING FABRIC

Repeat the math steps above for your lining fabric.
However, in Step 2, subtract 3" from the Total Cut Length.
So for my lining fabric, I will cut the lining 27 ", which is 3 " shorter than the main fabric.
When I hem the lining, it will be a 1 " double fold hem. Because the lining is shorter, it will not show below the main fabric when finished.

My math says I need 3 yards of lining fabric.
